

# Comfort

The Northern Bear Golf Course is one of only three Jack Nicklaus Signature courses in Canada. It is a spacious eighteen-hole course set in wooded flatlands, carefully crafted with exquisitely placed water hazards. The club house occupies a commanding position with avant-garde modern architecture enhanced with tall, 35-foot high glass windows that reach to a cathedral roof, enabling truly panoramic vistas.

While the south and western views from the members' lounge and the Pro Shop were a delight, the accompanying solar heat and glare was uncomfortable. Even worse in the Pro's shop, the staff could not read their PC screens and the shoppers could not enjoyably view the merchandise.

The members and the Pro were unhappy: Bill Penny, General Manager, had to find a solution. He called in a local VISTA dealer who recognized the problem and knew the solution. He recommended the installation of VISTA V33 Sunrise Bronze solar control window film: a new film designed

specifically to reduce interior heat (Sunrise rejects 62% of solar heat gain through glass in the summer) and tame the sun's glare by 63%. The film also totally (99.9%) blocks all UV rays from penetrating the glass, which with the sun's heat are the primary cause of fading and deterioration of fabrics, furnishings, wood floors and art pieces.

With the window film in place, members can enjoy the views from their lounge at ease. The Pro Shop's staff can read their PC screens while the players shop and purchase golf wares in comfort. General Manager Bill Penny also takes comfort in the knowledge that he has done what he can to help protect the club's interior from fading and UV deterioration.
